PMJAY 2.0 – Provider Portal

Preauthorization, Claims & Insurance Integration
Scope of Work, Process Flow & Integration Models

14. Screenshots Mapping (UI → Process Alignment)

Note: The following screenshots demonstrate the end-to-end workflow implemented in the PMJAY 2.0 Provider Portal. Each screen is mapped to its corresponding business process.

Figure 1: Provider Login Screen

Purpose: Secure authentication of hospital users
Key Features:
• User ID & Password based login
• IP logging
• Role-based access
Business Outcome: Ensures only authorized provider staff can access patient and insurance data.

Figure 2: Provider Dashboard

Purpose: Central operational overview
Key Indicators:
• Registrations
• Coverage & Plan Verification
• Preauthorizations
• Enhancements
• Claims
• Discharge
• Rejections
Business Outcome: Real-time visibility of hospital–insurance transactions.

Figure 3: Coverage & Plan Verification

Purpose: Track insurance eligibility and policy verification
Status Types:
• Coverage In Progress
• Insurance Plan Verified
Business Outcome: Prevents invalid or ineligible preauthorization requests.

Figure 4: Preauthorization Case List

Purpose: Identify cases awaiting insurer approval
Displayed Data:
• Admission number
• Patient details
• Submitted amount
• Current status
Business Outcome: Improved follow-up and faster insurer communication.

Figure 5: Initiate Preauthorization – Patient Search

Purpose: Retrieve registered patient using admission number
Validated Information:
• Patient demographics
• ABHA / Member ID
• Policy & coverage details

Business Outcome: Ensures correct patient-policy mapping.

Figure 6–10: Preauthorization Steps

Step-wise capture of patient information, admission details, treatment plan, financial summary, and final review & submission to payer.

15. Insurance Integration Architecture

Suvarna Technosoft has designed the system to support multiple integration models, ensuring flexibility across hospitals and insurance ecosystems.

16. Integration Models Supported

Model 1: Integration WITH Suvarna HIMS

End-to-end automation with zero duplicate entry. Claims and preauthorizations are automatically pushed to insurance companies.

Model 2: Integration WITHOUT HIMS (Standalone)

Hospitals use Suvarna Provider Portal directly with structured manual entry and seamless insurance submission.

Model 3: Integration with Third-Party HIMS (API Based)

API-driven integration enabling data normalization and insurer connectivity from heterogeneous hospital systems.

17. Dual Mode Claim & Preauth Submission

Mode	Description
Automatic Push	From Suvarna HIMS → Insurance
Manual / Semi-Auto Push	From Suvarna Provider Portal
API-Driven Push	From Third-Party HIMS

18. Compliance & Standards

Fully aligned with NHCX standards, secure APIs, complete audit trail, and role-based access. The solution is NHCX compliant but not limited to NHCX and can integrate with any insurance company.

19. Value Proposition for Insurance Companies

One-time integration, standardized data, reduced reconciliation effort, improved accuracy, and faster decision-making.

20. Company Profile – Suvarna Technosoft

Suvarna Technosoft Pvt. Ltd. has over 20 years of healthcare IT experience with 450+ hospital HIMS implementations across India. Our solution is scalable, compliant, and integration-ready.

21. Final Note

The Provider Portal works with or without HIMS, supports any insurance company, offers multiple integration approaches, and is production-ready.
