

Payment Transaction Posting

Version 1.6.3

1. POST Transaction API

Mosambee will post the Failed / successful transaction through the posting URL provided by the

Merchant Posting URL: HTTPS URL has to be provided by Merchant/client.

1.1. Checksum Generation

Mosambee generates a checksum using the logic mentioned below:

Checksum value = SHA-512 (transactionId + merchantId+ TransactionRRN + Salt value)

Please note that certain client may have multiple merchant id configured and the same needs tobe considered while calculating the checksum for validation

Sample values for the testing salt value:

Salt value: 448B2EAC08375149D8D352D56D8BD42C30A913C696893EDC
TRANSACTIONID: 191327
MERCHANTID: BSYPSYZBG9FBVPW6KCH
TRANSACTIONRRN: 7000019282
CHECKSUM: TRANSACTIONID +MERCHANTID + TRANSACTIONRRN+ SALTVALUE
CHECKSUM:
SHA.512(191327BSYPSYZBG9FBVPW6KCH7000019282448B2EAC08375149D8D352D56D8BD42C30A913C696893EDC)

Note :

- "creditDebitCardType": “NA/UPI", This field is mandatory for card transactions; for non-card transactions, it is optional.

1.3. Reposting

Incase transaction posting failed or not received the response from client server, we will repost the same transaction data in next 30 minutes.

It keeps trying 3 times after every 30 minutes if the posting is timed out or in the response no 200 codes received.

In Case re-posting failed in all attempt; client has to manage the reconciliation based on the daily reports on a T+1 day manually.

1.4. Error Codes

Parameter	Message
200	Success
401	Authorization Failed

1.5. Additional Notes to manage the Posting:

- In Case, if Mosambee received the response other than success or Merchant_refTxnId is blank from client server; then this transaction will be re-posted as described in Re-posting section.
- Response code “0” or “00” or “000” will be received in case of Approved transaction.
- The response codes are depending on the Acquirer/Switch response.
- Other than response code “00”, rest all the status codes are declined.
