Suvarna Insurance Portal

Preauthorization, Claims & Insurance Integration

Scope of Work, Process Flow & Integration Models

Note: The following screenshots demonstrate the end-to-end workflow implemented in the PMJAY 2.0 Provider Portal. Each screen is mapped to its corresponding business process.

1:Provider Login Screen

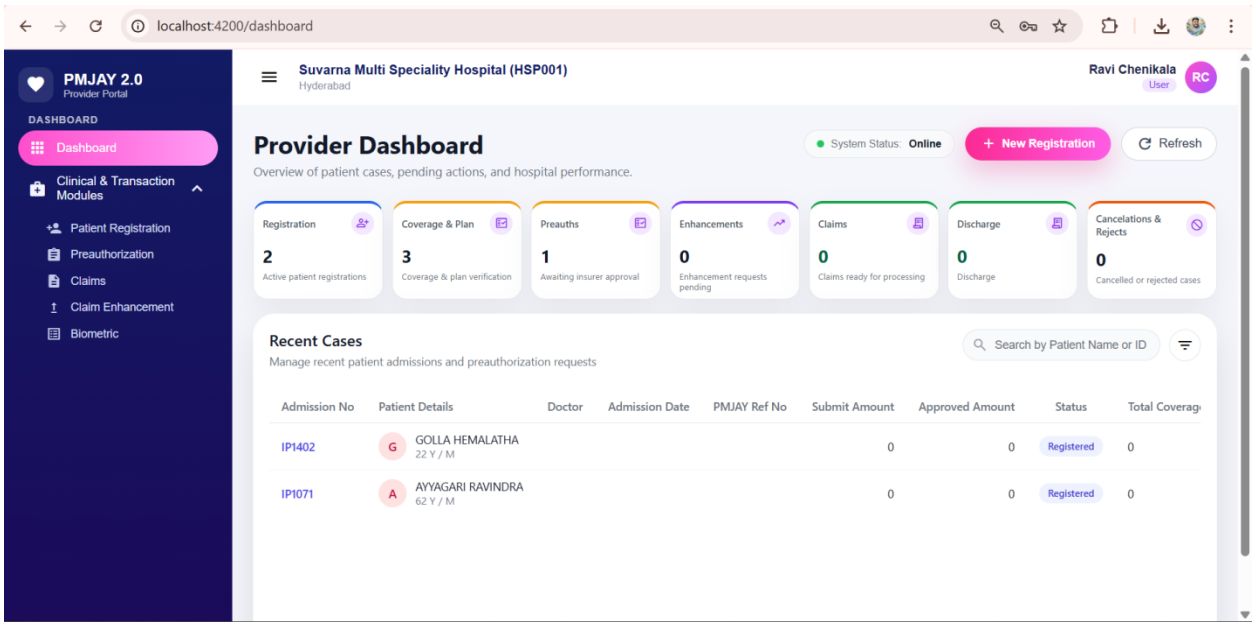

Purpose: Secure authentication of hospital users
Key Features:

- User ID & Password based login
- IP logging
- Role-based access

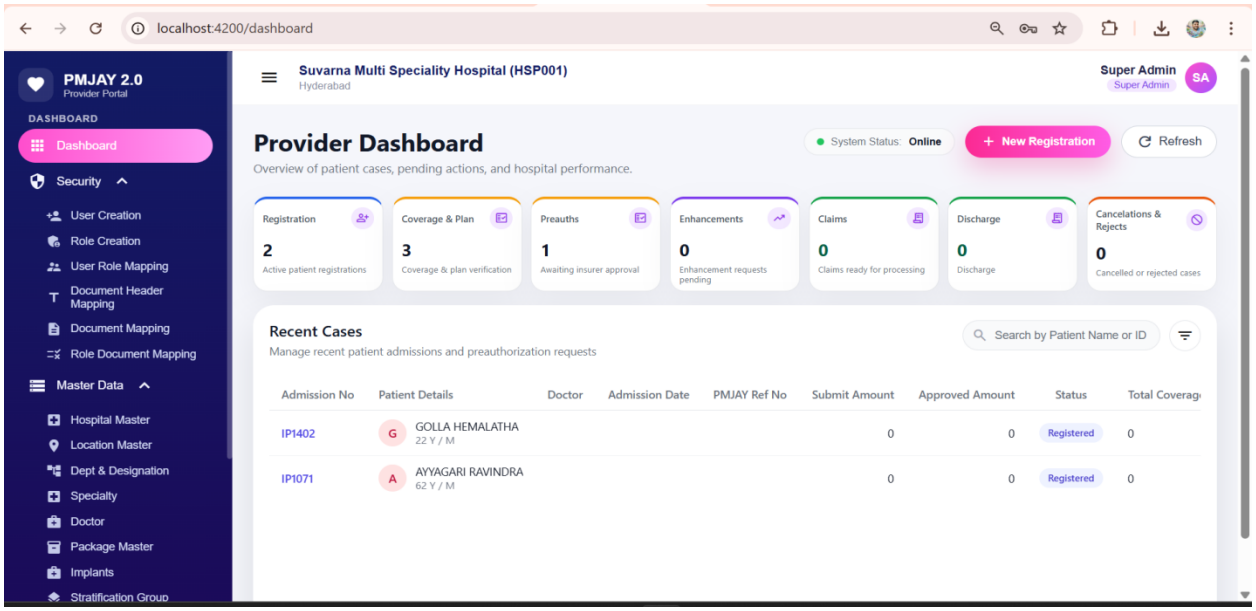

Business Outcome:
Ensures only authorized provider staff can access patient and insurance data.

2:Provider Dashboard

User View

Admin View

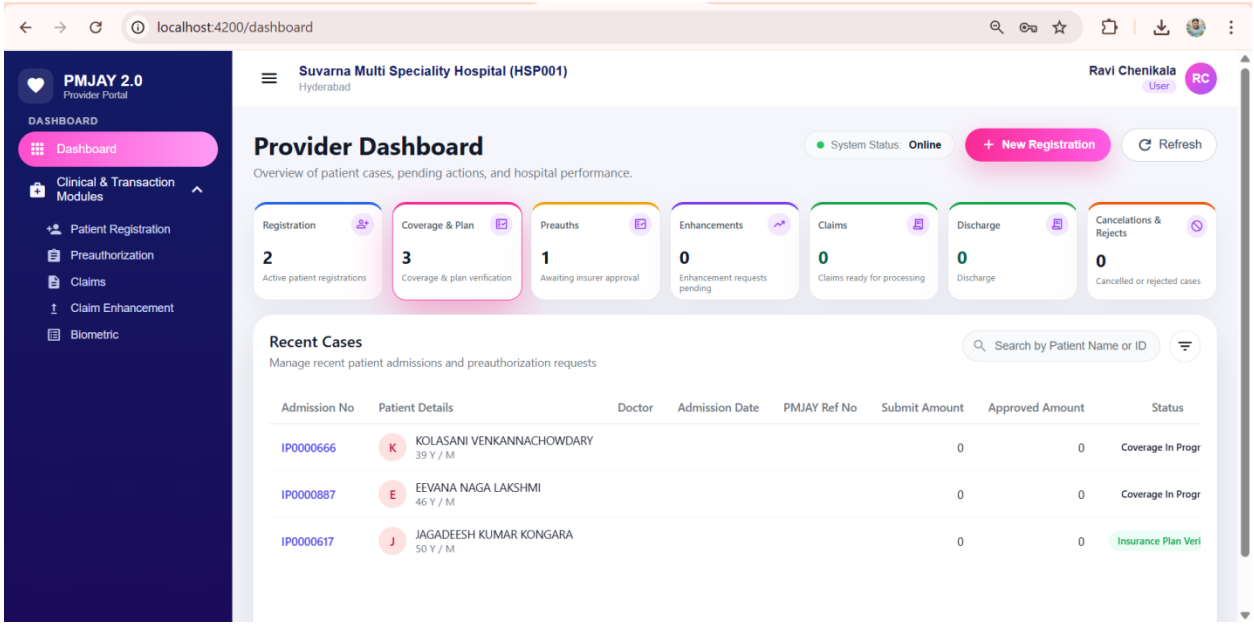

Purpose: Central operational overview
Key Indicators Displayed:

- Registrations
- Coverage & Plan Verification
- Preauthorizations
- Enhancements
- Claims
- Discharge
- Rejections

Business Outcome:
Real-time visibility of hospital–insurance transactions.

3: Coverage & Plan Verification – Dashboard Drilldown

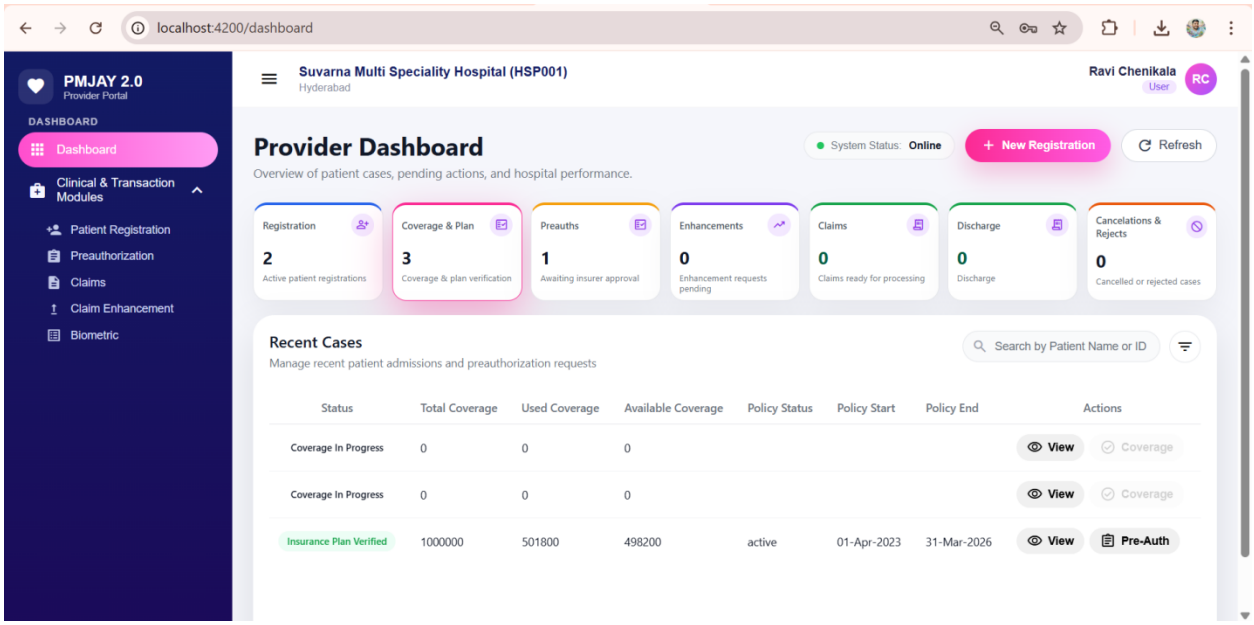

Purpose: Track insurance eligibility and policy verification

Status Types:

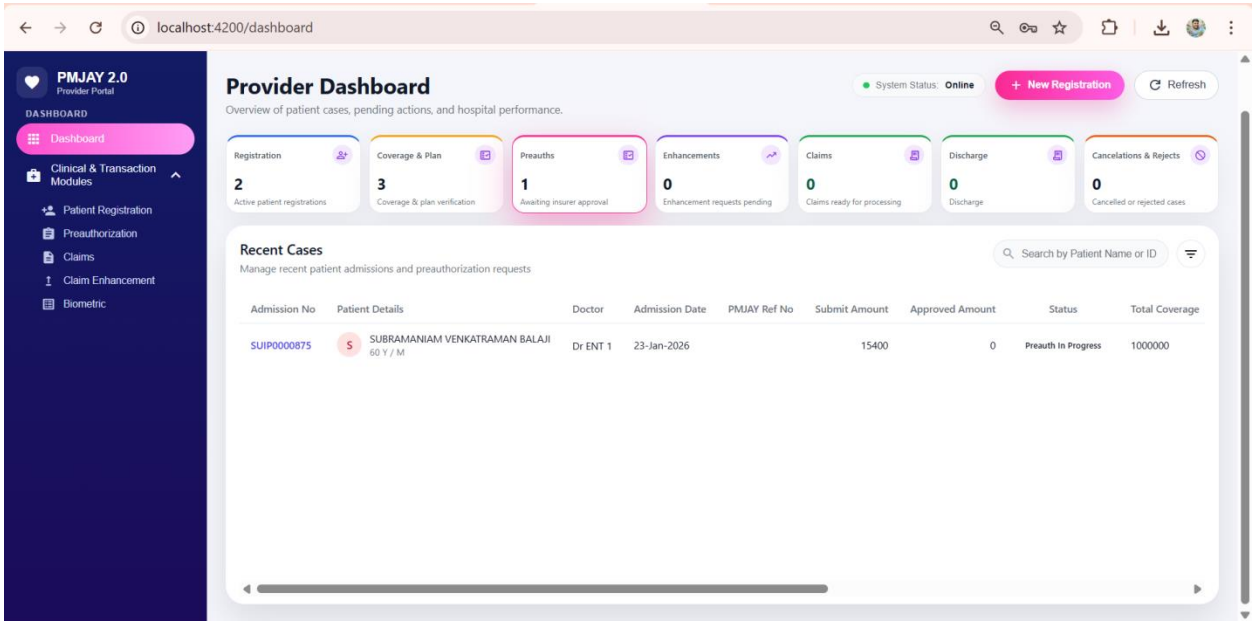

- Coverage In Progress
- Insurance Plan Verified

Business Outcome:
Prevents invalid or ineligible preauthorization requests.

4: Preauthorization Case List

Purpose: Identify cases awaiting insurer approval

Displayed Data:

- Admission number
- Patient details
- Submitted amount
- Current status

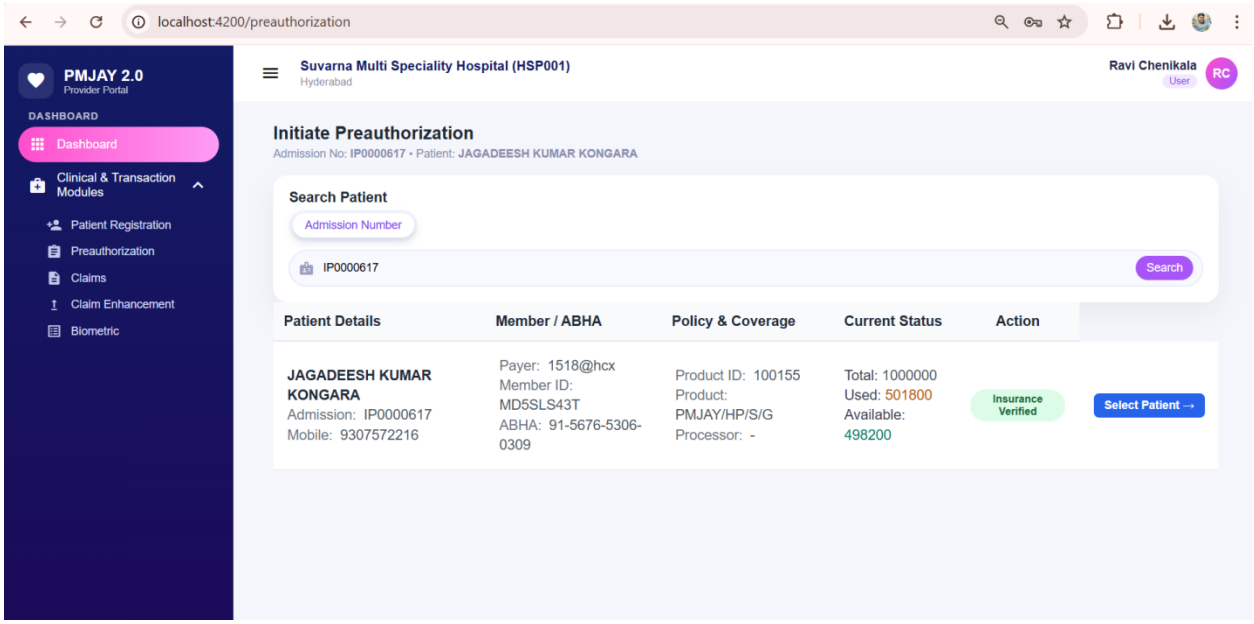

Business Outcome:
Improved follow-up and faster insurer communication.

5: Initiate Preauthorization – Patient Search

Purpose: Retrieve registered patient using admission number
Validated Information:

- Patient demographics
- ABHA / Member ID
- Policy & coverage details

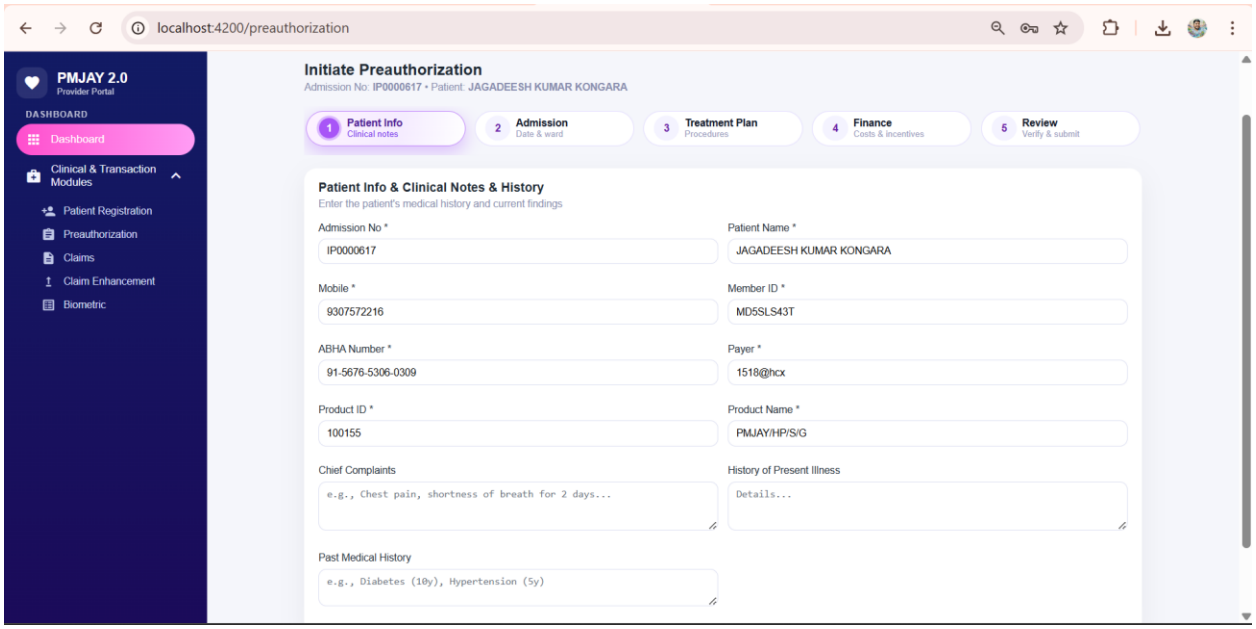

Business Outcome:
Ensures correct patient-policy mapping.

6: Step 1 – Patient Information

Purpose: Clinical and demographic confirmation
Includes:

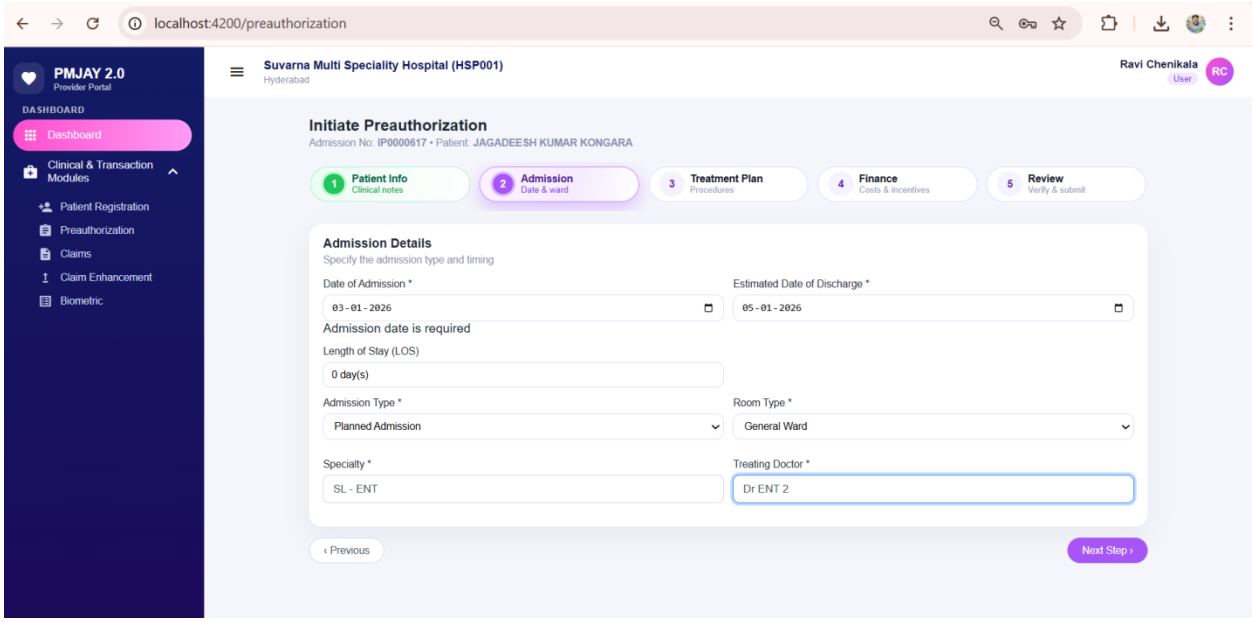

- Patient identity
- Admission details
- Clinical notes

7: Step 2 – Admission Details

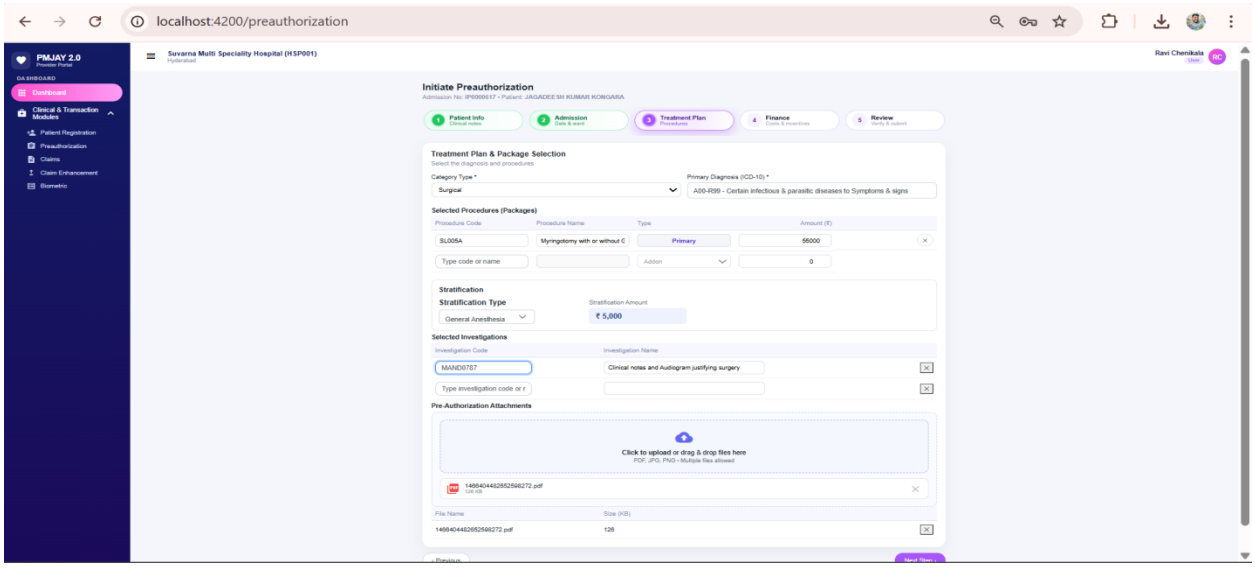

Purpose: Capture hospitalization parameters
Data Points:

- Admission date
- Expected discharge date
- Length of stay (LOS)
- Admission type
- Room type
- Treating doctor
- Specialty

8: Step 3 – Treatment Plan

Purpose: Define medical necessity

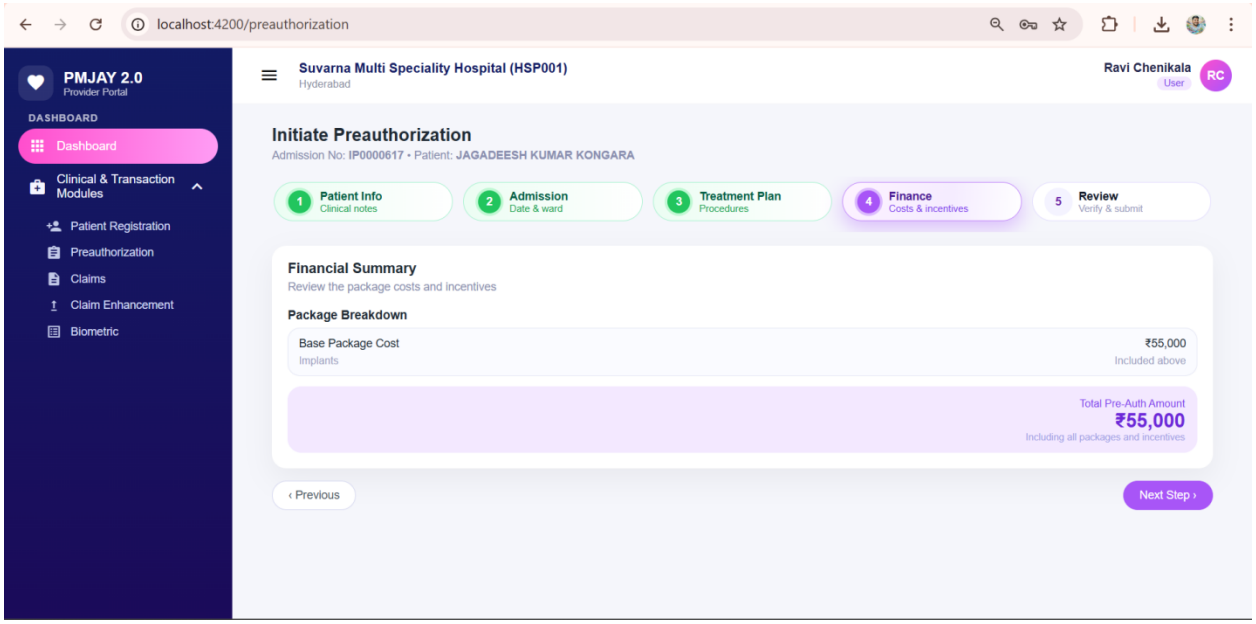

Includes:

- ICD-10 diagnosis
- Procedure / package selection
- Stratification
- Investigations
- Supporting clinical document uploads

9: Step 4 – Financial Summary

Purpose: Cost validation before submission
Shows:

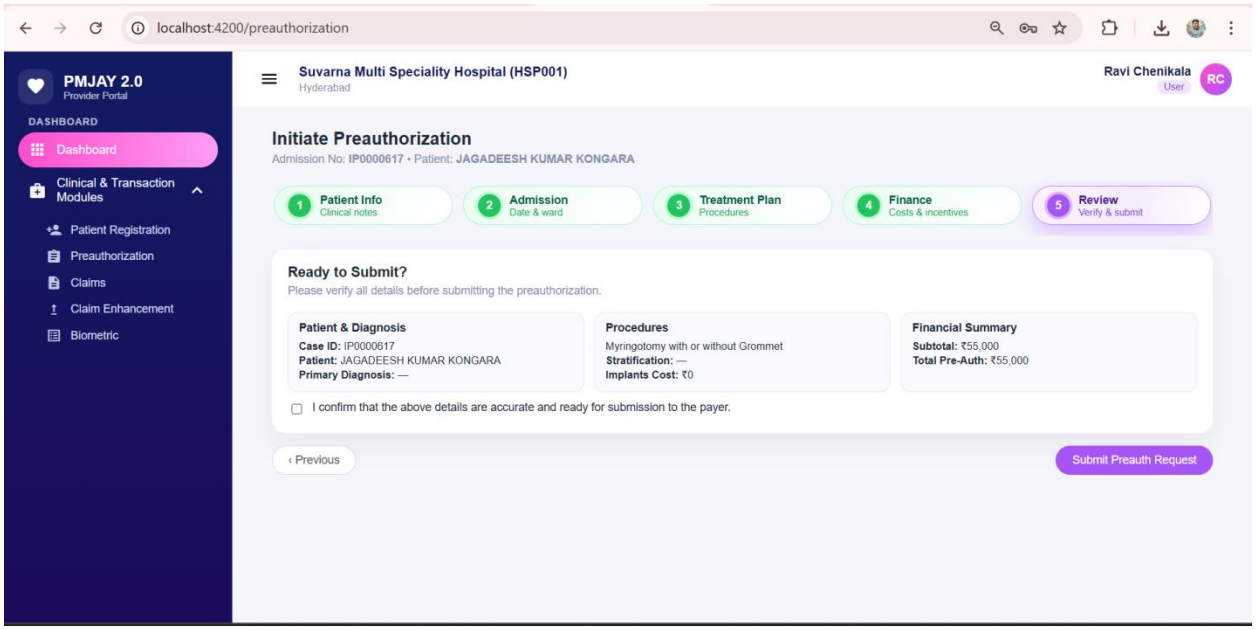

- Base package cost
- Stratification amount
- Implant cost
- Total preauthorization amount

10: Step 5 – Review & Submit

Purpose: Final confirmation and payer submission
Actions:

- Review patient, diagnosis, procedures, costs
- Provider declaration
- Submit preauthorization request

11. Insurance Integration Architecture

Suvarna Technosoft has designed the system to support **multiple integration models**, ensuring flexibility across hospitals and insurance ecosystems.

12. Integration Models Supported

Model 1: Integration WITH Suvarna HIMS

Flow:

- Hospital uses **Suvarna HIMS**
- Patient, admission, procedures captured in HIMS
- PMJAY / Insurance workflows auto-triggered
- Claims & preauthorizations automatically pushed to insurance companies

Key Benefits:

- Zero duplicate data entry
- End-to-end automation
- Faster TAT for approvals and settlements

Best For:
Hospitals already running Suvarna HIMS.

Model 2: Integration WITHOUT HIMS (Standalone Mode)

Flow:

- Hospital does NOT have any HIMS
- Uses **Suvarna Technosoft Provider Portal** directly
- Manual but structured data entry
- Preauth & claims pushed to insurance companies

Key Benefits:

- No dependency on hospital HIMS
- Quick onboarding
- Ideal for small & mid-size hospitals

Model 3: Integration with Third-Party HIMS (API Based)

Flow:

- Hospital uses **third-party HIMS**
- Third-party system exposes APIs
- Suvarna Technosoft builds integration layer
- Data consumed and normalized
- Claims and preauth pushed to insurance companies

Key Benefits:

- HIMS-agnostic architecture
- Supports heterogeneous hospital IT environments
- Future-proof integration

13. Dual Mode Claim & Preauth Submission

Our solution supports **two operational modes**:

Mode	Description
Automatic Push	From Suvarna HIMS → Insurance
Manual / Semi-Auto Push	From Suvarna Provider Portal
API-Driven Push	From Third-Party HIMS

This ensures **maximum adaptability** for insurers and providers.

14. Compliance & Standards

- Fully aligned with **NHCX standards**
- Modular API design
- Secure data transmission
- Complete audit trail
- Role-based access control

Important:
Although NHCX compliant, the solution is **not limited to NHCX only** and can be integrated with **any insurance company** as per agreed API specifications.

15. Value Proposition for Insurance Companies

- One-time integration supports multiple hospitals
- Standardized claim & preauth structure
- Reduced reconciliation effort
- Improved data accuracy
- Faster decision-making

16. Company Profile – Suvarna Technosoft

Suvarna Technosoft Pvt. Ltd. has been delivering **healthcare IT solutions for over 20 years**, with our **HIMS product successfully implemented in more than 450 hospitals across India**.

We have built this solution with:

- Deep healthcare domain expertise
- Multi-payer integration capability
- Proven scalability
- Complete regulatory alignment

With our technical expertise and complete alignment with NHCX standards, we are confident in executing this integration process efficiently.

Your support in this initiative would not only benefit our organization but also contribute meaningfully to the broader goal of **strengthening digital health integration across the country**.

17. Final Note

This document demonstrates that **Suvarna Technosoft's Provider Portal**:

- Works **with or without HIMS**
- Supports **any insurance company**
- Provides **multiple integration approaches**
- Is production-ready and scalable
